

W.AI.TLIST

CATCH-ALL FOR YOUR DENTAL CLINIC!

BY STEVEN PECKSEN

MOTIVATION

Why does your clinic need W.AI.TLIST?

THE PROBLEM: TASK-SWITCHING

Patients calling in to cancel or reschedule takes you away from the task you were already doing.

Finding a patient to schedule into that newly open spot is time-consuming and effortful.

OUR SOLUTION: AUTOMATE YOUR WAITLIST

Have an appropriate patient suggested to fill the newly open appointment time

Match patients waiting to be seen with their favourite clinician

THE GAP WE FILL

Clinic managers wanting to focus on more deep work and human touch duties but are sucked into filling appointments

Scheduling software = passive and unintuitive

THE END RESULT

A schedule full of satisfied patients

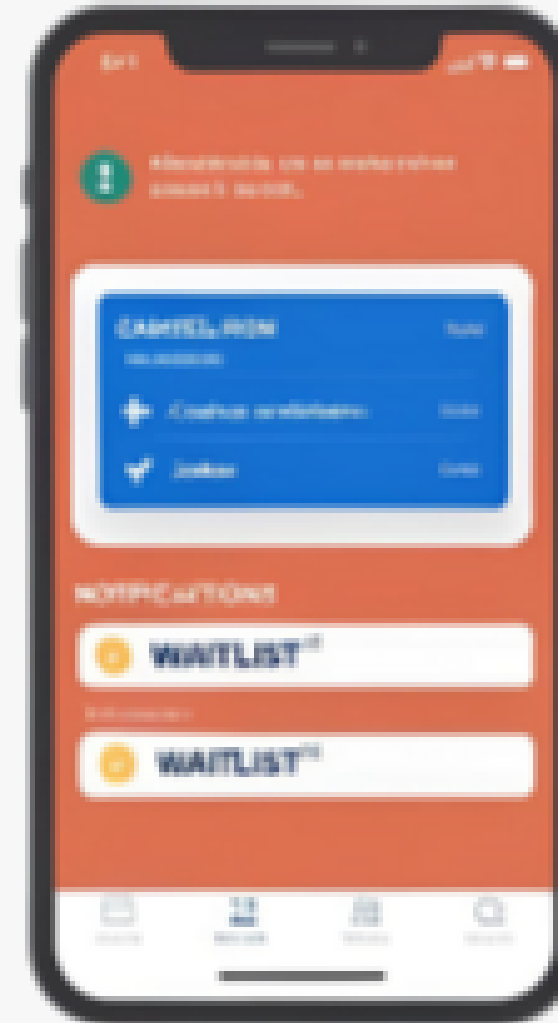

Clinic managers with more time to focus on more important tasks

Less stress in the clinic overall
= A happier working environment

Existing Solutions & Their Gaps

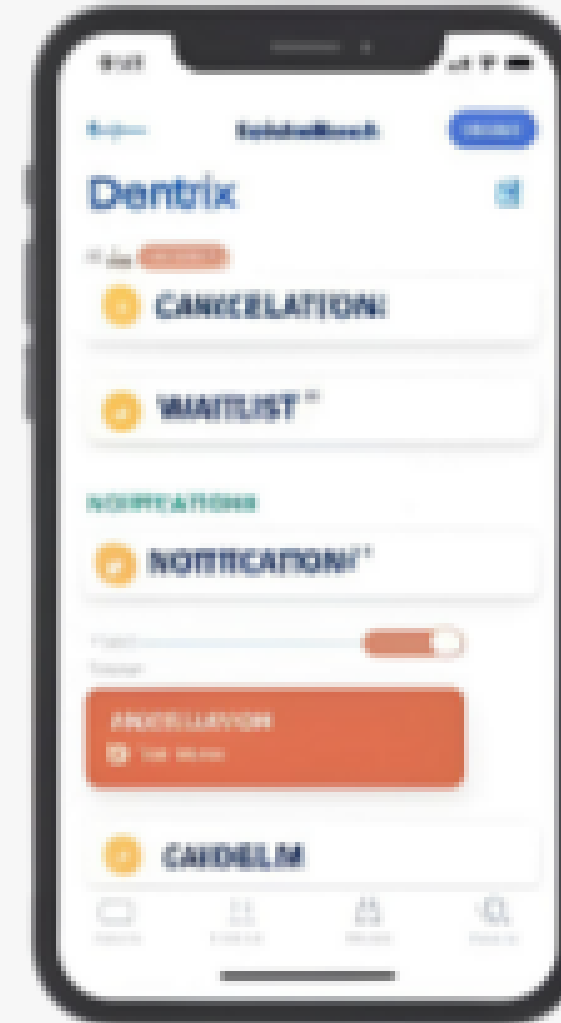

Zocdoc

Automates appointment booking and waitlisting, but lacks smart, automated matching of cancellations to patients.

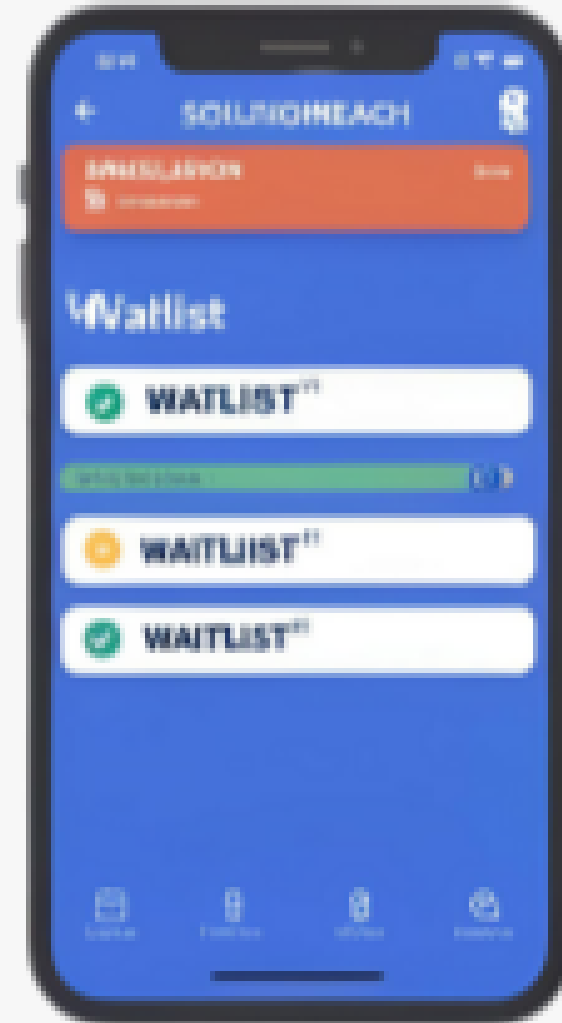

DENTRIX

Comprehensive dental practice software, but still requires manual intervention to fill canceled slots.

SOLUTIONREACH

Automates reminders and waitlisting, but lacks an intelligent matching system and proactive scheduling features.

Market Gaps & Our Solution

Automated Waitlist Management with Intelligent Matching

Problem: Existing tools don't automatically match patients to available slots.

Solution: Our app auto-matches patients based on treatment, preferred times, and hygienist availability.

Urgency & Waitlist Prioritization

Problem: Time-sensitive nature of cancellations and lack of priority systems.

Solution: Our app uses a "first-in-first-out" system and calculates average wait times to reassure patients.

Market Gaps & Our Solution

Real-Time Notification & Auto Booking

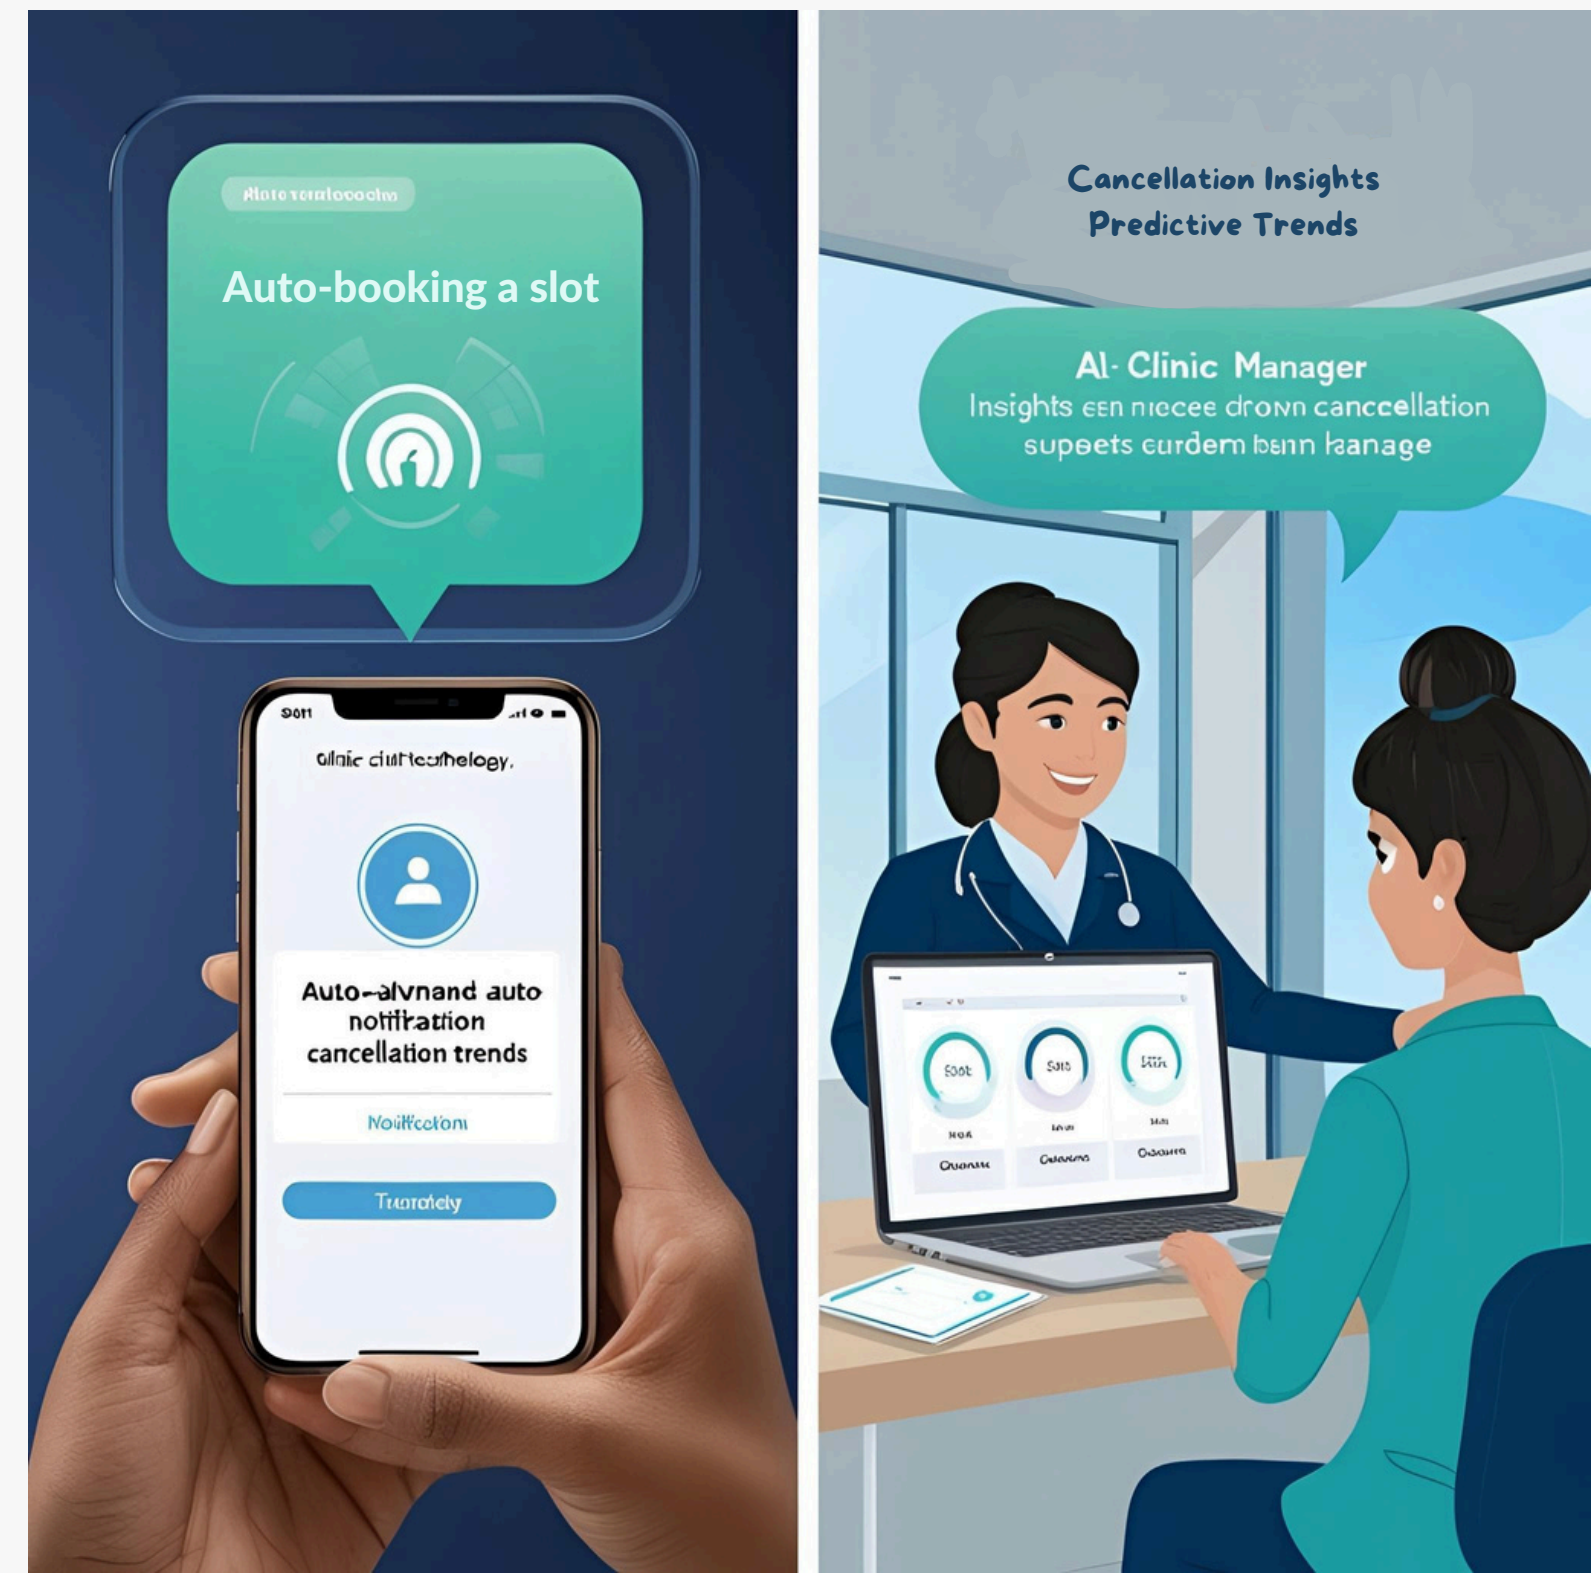

Problem: Patients need to act fast on cancellations, and clinic staff must manually follow up.

Solution: Automated notifications sent to the first patient on the list, and auto-booking once they accept or decline. The second person is only notified if the first declines.

Predictive Scheduling Insights

Problem: Clinics can't predict cancellations accurately.

Solution: AI tracks patterns of cancellations and helps managers prepare for likely gaps.

Key Competitive Advantages & Unique Features

Speed & Efficiency

Problem: Existing systems rely too much on manual work to fill slots.

Solution: Your app streamlines the process, making waitlist management faster and less labor-intensive.

Tailored for Dental Clinics

Problem: Generic systems don't cater to the specific needs of dental offices.

Solution: Your app is specifically designed for dental clinics, optimizing for hygienist availability, appointment types, and specific treatment needs.

Where's the AI, you ask?

Optimized Scheduling & Predictive Cancellations

Problem: Clinics struggle with unanticipated cancellations and downtime.

Solution: AI-driven insights to predict and optimize scheduling, minimizing gaps and reducing downtime.

Clinic Manager
Review AI predictions on patient scheduling/cancellations to fill possible gaps and optimize everyone's time effectively

HOW?

W.AI.TLIST Process Flow

Input (from patients or clinic staff)	AI Agents	Output (to both patient & clinic staff)
Appointment Cancellation	Looks for waitlist patient who matches appointment timeframe and newly available clinician (hygienist) based on wait time (FIFO)	For now: Name of suitable patient to fill cancelled appointment Eventually: Emails viable patient to request appointment fill, adds them to schedule when approved

It's that easy!

Use Cases

Who needs W.AI.TLIST?

User Group	Pain Point	How W.AI.TLIST helps
Clinic Owners & Managers	Having empty appointment slots wastes clinic money, hustling to fill them takes you away from more important tasks	Less admin work, more focus on patient experience
Clinicians, Hygienists	Never knowing whether the work you show up to perform will be done	Always having someone in the chair, grateful for the work you do
Patients	Being stuck on a waitlist because most clinics are fully booked 6 months out	Gets eager patients in the chair for their appointments when they are able to drop in for a cancelled appointment timeslot

Example Story: (Clinic Manager)

- ✗Before W.AI.TLIST: Manually contacting client on a written waitlist of patients, receiving “No” after “No”
- ✓After W.AI.TLIST: Navigating having a fully booked clinic without sending a single email or making one call
